

AIMDB STRATEGIC RESTRUCTURING PROPOSAL

ORGANIZATION REACTIVATION & OPERATIONAL FRAMEWORK

Prepared By: Adam Torres Target Org: AI & In-Memory Database Club (AIMDB) Faculty Advisor: Prof. Naser Islam

1. EXECUTIVE SUMMARY

Following the graduation of previous officer leadership, the Artificial Intelligence & In-Memory Database Club (AIMDB) requires a structured operational restart. While the organization maintains an important academic focus on enterprise analytics and in-memory database platforms under the Naveen Jindal School of Management (JSOM), current public-facing communications, recruitment channels, and administrative workflows are inactive or fragmented.

This document outlines a practical plan to reactivate AIMDB. By establishing a 7-member executive board, implementing an automated Enterprise Resource Planning (ERP) operational setup, standardizing brand identity assets, and hosting foundational technical workshops alongside a structured peer mentorship program, AIMDB can rebuild member engagement and establish long-term operational stability.

2. CURRENT OPERATIONAL DIAGNOSIS

Area 1: Public Outreach & Digital Infrastructure

- **Inactive Communication Channels:** Primary platforms require immediate updates. LinkedIn has had no posts since creation, Instagram has been inactive since November 2024 with incorrect information, and the official website (`aimdb.org`) contains broken forms, outdated rosters, and incorrect event dates.
- **Fragmented Brand Identity:** The organization lacks a single official logo, clear color palette, or visual style guide. This prevents consistent marketing materials and makes member-generated content look disconnected.
- **Opaque Recruitment Pipeline:** Prospective UTD students currently have no straightforward way to check membership criteria, complete an application, or find upcoming meeting times.

Area 2: Executive Management & Administrative Systems

- **Obsolete Officer Structure:** The site lists 17 titled positions, but most belong to graduated or inactive members. This creates role confusion and title inflation without covering core tasks.
- **Absence of Standard Operating Procedures:** Without documented guidelines or digital tools, managing rosters, tracking attendance, and handling leadership transitions requires excessive manual effort.
- **Proposed Operations System:** Implement a lightweight ERP system, drawing from design patterns used for the JSOM Undergraduate Dean's Council, to automate attendance tracking, forms, and membership records.

Area 3: Event Rhythms & Group Engagement

- **Need for Consistent Programming:** Establishing a clear rhythm of recurring technical meetings and semester goals is necessary to give members a reason to stay involved.
- **Communication Systems:** Event details should be distributed predictably via site calendar integrations, automated email notifications, and a dedicated Microsoft Teams team.

3. PROPOSED LEADERSHIP STRUCTURE

AIMDB will transition to a 7-member executive board. This structure defines clear boundaries for each role, preventing overlap while ensuring essential administrative duties are covered.

Role	Primary Scope & Responsibilities	Key Deliverables
President	Overall strategic vision, university compliance, advisor alignment, and general meeting execution.	Semester plan, JSOM compliance.
Vice-President (Administrative)	Internal operations, cross-functional execution, committee tracking, and SOP enforcement.	Task tracking, operational execution.
Secretary	Documentation archives, meeting minutes, operational guidelines, and central calendar management.	Central calendar, meeting notes, SOP library.
Software Officer	Website updates (`aimdb.org`), digital forms, member ERP administration, and software asset handoffs.	Site maintenance, form flows, ERP setup.
Finance Officer	Financial administration, expense processing, dues collection, and active roster verification.	Financial ledgers, dues tracking, event budget.
Marketing Officer	Internal culture, event photography, social gathering planning, and member retention.	Media capture, internal socials, group cohesion.
Outreach Officer	External marketing (LinkedIn/Instagram), recruitment campaigns, graphics, and campus visibility.	Social media posts, graphics, involvement fairs.

4. BRAND IDENTITY & UGC FRAMEWORK

Building campus recognition requires standardizing visual assets across all digital and print touchpoints.

- **Brand Standardization:** Establish one official primary vector logo, secondary mark, font pairing, and color palette (UTD Comet accents paired with corporate neutrals).
- **User-Generated Content (UGC) Templates:** Provide members and officers with pre-approved Canva/Figma templates for event promotion and project updates. This enables general members to cleanly post about their work on LinkedIn without violating brand standards.

5. STREAMLINED ONBOARDING PIPELINE

To eliminate recruitment friction, prospective members will enter through a standardized 4-step onboarding pipeline managed via the internal ERP system:

STEP 1 Discovery Classroom visits, campus involvement fairs, and targeted social posts.	STEP 2 Simple Application Centralized web form capturing contact info and technical interests.	STEP 3 System Setup Automated invites to MS Teams, calendar feed, and member email list.	STEP 4 Orientation Semester kickoff meeting and cohort mentorship matching.
---	--	--	---

6. EARLY-SEMESTER EDUCATIONAL FRAMEWORK

Reactivating member interest requires hosting introductory, low-barrier technical workshops during the first several weeks of the semester. Because many incoming UTD students may be unfamiliar with the technical mechanics of in-memory computing, early programming should focus on foundational knowledge rather than advanced niche topics.

Core Objectives of Early Programming:

- **Demystify In-Memory Computing:** Explain fundamental concepts like row versus column storage, RAM latency versus disk storage, and why platforms like SAP HANA or Redis are necessary for high-speed data processing.
- **Establish Technical Context:** Connect database theory to modern AI infrastructure, showing students how real-time data pipelines power analytics and enterprise decision-making.
- **Lower Entry Barriers:** Design initial sessions so students from varying majors (Information Systems, Computer Science, Business Analytics) can follow along comfortably.
- **Drive Inbound Recruitment:** Use these early informational sessions to build rapport, answer questions, and introduce students to upcoming project opportunities and mentorship tracks.

7. PEER MENTORSHIP PROGRAM: AIMDB ACCELERATE

To support long-term retention and build a steady pipeline for future officer roles, AIMDB will implement an 8-week peer mentorship program matching upperclassmen mentors with incoming student mentees.

Phase	Timeline	Core Focus	Key Deliverables
Phase 1: Setup	Weeks 1–2	Technical Baseline & Setup	Resume review, tool setup (SQL/Python), goal setting.
Phase 2: Execution	Weeks 3–6	Guided Mini-Project	Small-group project focusing on database querying or dashboarding.
Phase 3: Showcase	Weeks 7–8	Project Presentation & Pipeline	Group presentations; qualified mentees recommended for junior officer roles.

8. IMMEDIATE IMPLEMENTATION STEPS

1. **Advisor Alignment:** Review proposal with Faculty Advisor Prof. Naser Islam, finalize core leadership appointments, and confirm semester objectives.
2. **Phase 1 (Weeks 1–2):** Update public platforms (`aimdb.org`, LinkedIn, Instagram), release standardized brand assets, and deploy the internal ERP system.
3. **Phase 2 (Weeks 3–4):** Host the semester kickoff meeting, launch early educational sessions, and open applications for the mentorship program.
